Matte finish shrink sleeve films

kpEnhance[®] LFM matte PETg film is designed to save you money. Matte finish graphics are extremely popular as they produce stunning imagery that consumers love. To achieve a matte finish, typically brand owners needed to print a matte coating on the film. This is an expensive step. Our kpEnhance[®] LFM film has the matte effect engineered into the film itself saving brands that extra step and cost!

Benefits

Matte effect as part of the label saves money

Avoid using an expensive FDA approved matte coating

Solvent seaming issues will disappear

Excellent print process capabilities

Applications

- Craft beer cans
- Beauty care products
- Health aid products
- Home care products
